

## Card: Integrated Cleaner

# Integrated vacuum cleaner for cards

Trützschler cards can be equipped with an integrated vacuum cleaning system that allows to remove dust and fibers directly via the machine's exhaust air. This ensures effective and fast cleaning of critical areas without the need for separate external extraction units. In addition, the system can be used for cleaning with compressed air. This combination improves machine cleanliness, reduces maintenance effort, and helps to maintain stable operating conditions.

## Benefits

- Fibers and waste are vacuumed up with the card waste instead of being blown away
- Integrated compressed air line – no external compressed air line required

## Field of application

- TC 30/TC 30i
- TC 26/TC 26i

## Execution

- System will be adapted inside the card

## Technical details

- 12.5 m hose length - allows you to reach every part of the carding machine and the can changer
- -650 Pa suction pressure (depending on card suction pressure)
- 6 bar compressed air connection
- Ergonomic and easy- to-use air gun
