Precise Mote Setting PMS 2

# New Knife Setting – Precise Mote Setting PMS

The new mote knife system PMS 2 enables significantly more flexible settings for waste extraction. This adaptability allows the separation process to be precisely adjusted to different raw material qualities and operating conditions.

As a result, raw material utilization is substantially improved due to a more selective removal of waste, reduced good-fiber losses, and optimized processing efficiency. PMS 2 ensures that valuable fibers remain in the process while impurities are reliably extracted, helping producers achieve higher yield, increased stability, and lower overall waste.

With PMS 2, customers benefit from maximum process control, consistent product quality, and improved economic performance – even when facing varying raw material characteristics.

## Benefits

- Better raw material utilization
- More flexible setting range
- Possibility to finetune trash separation depending on customer requirements and material
- Easy adjustment through display in combination with WASTECONTROL setting recommendations

## Field of application

- TC 19/TC 19i
- TC 15

## Execution

- New licker-in unit, incl. new wires

## Technical details

- Broader range of knife settings
- Closer setting up to 8/1000"
- 20° setting range
