

Card:
T-GO for TC 19

Upgrade your TC 19 to a TC 19i

Do you operate a TC 19 and want to upgrade it to the next level? With the TC 19i retrofit, your TC 19 becomes an intelligent card with T-GO, the only proven and automatic gap optimizer for operator-independent efficiency. Quality and productivity can be increased via its flexible features. And it always ensures the optimal carding gap setting.

Even an experienced technologist cannot carry out extremely narrow target settings of e.g. 2/1000" with the „cold“ card at standstill. Centrifugal forces and expansions due to temperature increase have a considerable influence on this setting and there is the risk of damage to the clothing or the card. With the automatic, constant carding gap setting of T-GO, yarn manufacturers can realize very narrow settings and unprecedented quality and productivity potentials.

Customer example: Carded ring Ne 30, 90 kg/h

Benefits

- Latest card technology for intelligent carding gap setting
- Up to 40% less yarn imperfections
- Operator-independent high performance

Field of application

- TC 19

Execution

- Retrofit for mechanical, electronical and software adjustment
- PRECISETOP flat set

Technical details

- Target carding gap of up to 1/1000"
- 40/1000" setting range
- 2x Servomotors
- T-GO contact elements
